

# Junior Larvae Inspector Checklist

The best way reduce the number of mosquitoes in your yard is to eliminate areas where they can lay eggs. Even the smallest amount of standing water can serve as a breeding ground. Listed below are some common places where you might find mosquito larvae. With a parent, look for standing water and dump it out so larvae cannot grow there. Look in each item on the list and put a check in the correct box.

*We found larvae:*

*We found water and emptied it:*

*We didn't find either of these:*

<b>Bird baths</b>			
<b>Buckets</b>			
<b>Cans, bottles, jars</b>			
<b>Clogged rain gutters</b>			
<b>Empty containers</b>			
<b>Flower pots</b>			
<b>Pet dishes</b>			
<b>Plant leaves</b>			
<b>Ponds, Puddles</b>			
<b>Pools</b>			
<b>Tarps</b>			
<b>Tires</b>			
<b>Toys</b>			
<b>Trash cans</b>			
<b>Tree holes</b>			
<b>Other:</b>
